*The Brand of Choice*

## The Advantages of Steel

Manufactured with galvanized steel, Nucor Utility Buildings offer excellent resistance to moisture which can cause warping and rot with wood products. Steel also offers excellent protection against pests like rodents and insects that can do serious damage to wood structures and the buildings contents. Steel is noncombustible - it does not contribute to the spread of fire.

## Simple Foundations

Nucor Utility Buildings only require a simple slab foundation. There is no hassle in setting posts or pouring column pads, which can be costly.

## Certified Designs

Nucor Utility Buildings are designed and stamped by registered professional engineers to meet load and code requirements across many regions.

## Accessories

Nucor Utility Buildings can be customized with factory available accessories such as roll-up doors, entry doors, and windows.

## Panelized Construction

Nucor Utility Buildings are easy to erect. A complete building kit with all of the major components, factory cut to length and assembled - there is no cutting or fitting required in the field. Most components weigh less than 190 lbs, making it easy to erect without the use of heavy material handling equipment. Factory panelized wall sections can be erected on your slab and secured with fast set anchors that are provided.

## Ready to Finish

With steel studs and steel trusses 2' on center, Nucor Utility Buildings are ready to accept metal liner, OSB, or drywall without special accommodations. They accept residential fiberglass insulation as well as sprayed in foam insulations. The metal studs are also prepped with web holes for romex wiring or water and gas lines.

## Quality

Nucor Utility Buildings are manufactured by Nucor Building Systems, a leader in the metal building industry. At all four divisions there is a commitment to quality unmatched by any other manufacturer in the industry. All building components are proudly manufactured in the USA.
